

ENVIRONMENTAL POLICY

An environmentally responsible organisation.

As a distributor of clean pre-manufactured components and hardware, we strive for low environmental impact and high sustainability. Arlin has developed this policy to ensure that the business carries out its activities in a manner which gives due regard to environmental considerations in all areas of its operations.

While recognizing that safety and strength cannot be compromised, product selection, and operating systems will be appraised for their environmental consequences before implementation, and will be subject to ongoing review.

The company accepts a duty of care to the environment to reduce the usage of natural resources, recycle materials whenever practical, eliminate wastage, and reduce pollution. Practical principles of energy conservation, efficient goods handling and packaging are followed assiduously.

Following extensive market research, product surveys and analysis, Arlin is in a position to provide ecology focused consumers with high quality products, which many have the added benefit of being derived from sustainable resources.

The aim of this policy is to develop and promote environmental awareness and compliance within the company and the industry.
